

# SISE & CTE, JABALPUR

## ONLINE CLASS SESSION

- Date : 27/04/2020
- Coordinator : Smt. Sandhya Jain
- Class : M.Ed. 2<sup>nd</sup> Sem
- Time : 02 to 02:40 PM
- Paper : Research & Data Analysis
- Topic : Levels of Measurement.
  - \* Meaning of Measurement & Evaluation
  - \* Concept and Characteristics of Psychological Measurement & Physical Measurement
  - \* Discussion on Nominal or Classificatory Measurement with example
- TLM Used : Power Point Presentation
- Attendance : 39 Participant

### नामित मापन (Nominal Measurement)-

- पिनकोड  $\rightarrow$  220511
- ATM नंबर  $\rightarrow$  16
- बैंक खाता संख्या  $\rightarrow$  14-16
- खिलाड़ी संख्या  $\rightarrow$  11  $\rightarrow$  7
- मोबाइल नंबर  $\rightarrow$  10

### नामित मापन (Nominal Measurement)-

- पिनकोड
- ATM नंबर
- बैंक खाता संख्या
- खिलाड़ी संख्या
- मोबाइल नंबर

### Nominal Scale

- Assign responses to different categories
- No numerical difference between categories
- Examples
  - Gender
  - Marital status
  - State of residence
  - College major
  - SSN
  - Zip code
  - Student ID

नामित मापन (Nominal Measurement)-

- इनमें व्यक्तियों अथवा घटनाओं को किसी गुण या विशेषता के लिए कोई नाम, शब्द, अंक या संकेत प्रदान किया जाता है। इनमें क्रम या सम्बन्ध अंतर्निहित नहीं रहता है। यह एक गुणात्मक माप है, तथा प्राप्त मानों या संकेतों से कोई भी सक्रिया जैसे- जोड़, घटाव, गुणा, आदि सम्भव नहीं है।

## मापन

- किसी वस्तु के गुणों तथा विशेषताओं का विवरण गुणात्मक तथा मात्रात्मक दोनों ही सकता है। अतः मापन भी दो प्रकार के होते हैं- गुणात्मक मापन तथा मात्रात्मक मापन।
- गुणात्मक मापन में गुण या विशेषता की उपस्थिति/अनुपस्थिति दर्शायी जाती है अथवा गुण या विशेषता का प्रकार बताया जाता है
- मात्रात्मक मापन में कोई भी गुण या विशेषता कितनी मात्रा में उपस्थित है इसका यथार्थ विवरण प्रस्तुत किया जाता है।

Physical Measurement	Measurement in Behavioural Sciences
1. It is an absolute measurement.	1. It is a relative measurement.
2. The reference point is zero.	2. It has no absolute, normative or arbitrary zero. The reference point is group performance.
3. It has definite or certain order.	3. It has recognizable order.
4. Though ultimate perfection is not possible but defined and certain measurement is possible.	4. Perfection is not possible.
5. It has the fixed units for measuring a trait. It is constant throughout the measurement. Units are fundamental and of definite value.	5. There is no fixed unit for measuring any trait or variable. It varies during the process of measurement. Units are derived and of indefinite value.
6. The data are interpreted directly.	6. The raw data are meaningless but these have to be transformed into standard scores for interpretation.
7. The trait is directly measured.	7. The trait is indirectly measured with the help of behaviours.
8. It is perfectly objective and valid.	8. It is a subjective measurement but tries to make it objective and valid.
9. There are fixed tools for measuring the separate traits.	9. There is no fixed or final measuring instrument for a single trait or variable.
10. It is almost at ratio-scale.	10. It is at nominal, ordinal and interval scales.
11. It has a great precision.	11. It has less precision.

## Measurements

- *Physical measurement* involves dimensions that have agreed-upon standards and instruments.  
— Examples: length, weight, time.
- *Psychological measurement* is used to measure constructs for which there is no agreed upon standard or instrument.  
— Are there agreed upon standards for what is considered beauty, intelligence, or aggression?
- Psychologists develop measures to assess these and other psychological constructs.
